Daniel Liang teaches concepts of problem-solving and object-oriented programming using a fundamentals-first approach. Beginning programmers learn critical problem-solving techniques then move on to grasp the key concepts of object-oriented, GUI programming, advanced GUI and Web programming using Java. Liang approaches Java GUI programming using JavaFX, not only because JavaFX is much simpler for new Java programmers to learn and use but because it has replaced Swing as the new GUI tool for developing cross-platform-rich Internet applications on desktop computers, on hand-held devices, and on the Web. Additionally, for instructors, JavaFX provides a better teaching tool for demonstrating object-oriented programming.

To provide a better teaching and learning experience, for both instructors and students, this program offers:

- **Fundamentals-First Approach:** Basic programming concepts are introduced on control statements, loops, functions, and arrays before object-oriented programming is discussed.
- **Problem-Driven Motivation:** The examples and exercises throughout the book emphasize problem solving and foster the concept of developing reusable components and using them to create practical projects.

- **A Superior Pedagogical Design that Fosters Student Interest:** Key concepts are reinforced with objectives lists, introduction and chapter overviews, easy-to-follow examples, chapter summaries, review questions, programming exercises, and interactive self-tests.
