**Aluminum-Lithium Alloys: Processing, Properties, and Applications** From Butterworth-Heinemann

Because lithium is the least dense elemental metal, materials scientists and engineers have been working for decades to develop a commercially viable aluminum-lithium (Al-Li) alloy that would be even lighter and stiffer than other aluminum alloys. The first two generations of Al-Li alloys tended to suffer from several problems, including poor ductility and fracture toughness; unreliable properties, fatigue and fracture resistance; and unreliable corrosion resistance.

Now, new third generation Al-Li alloys with significantly reduced lithium content and other improvements are promising a revival for Al-Li applications in modern aircraft and aerospace vehicles. Over the last few years, these newer Al-Li alloys have attracted increasing global interest for widespread applications in the aerospace industry largely because of soaring fuel costs and the development of a new generation of civil and military aircraft. This contributed book, featuring many of the top researchers in the field, is the first up-to-date international reference for Al-Li material research, alloy development, structural design and aerospace systems engineering.

- Provides a complete treatment of the new generation of low-density AL-Li alloys, including microstructure, mechanical behaviour, processing and applications
- Covers the history of earlier generation AL-Li alloys, their basic problems, why they were never widely used, and why the new third generation Al-Li alloys could eventually replace not only traditional aluminum alloys but more expensive composite materials
- Contains two full chapters devoted to applications in the aircraft and aerospace fields, where the lighter, stronger Al-Li alloys mean better performing, more fuel-efficient aircraft

### **Editorial Review**

### **Users Review**

#### **From reader reviews:**

##### **William Martel:**

Here thing why this specific Aluminum-Lithium Alloys: Processing, Properties, and Applications are different and trusted to be yours. First of all reading through a book is good but it really depends in the content from it which is the content is as delightful as food or not. Aluminum-Lithium Alloys: Processing, Properties, and Applications giving you information deeper and different ways, you can find any reserve out there but there is no reserve that similar with Aluminum-Lithium Alloys: Processing, Properties, and Applications. It gives you thrill reading through journey, its open up your eyes about the thing which happened in the world which is probably can be happened around you. It is possible to bring everywhere like in area, café, or even in your approach home by train. For anyone who is having difficulties in bringing the imprinted book maybe the form of Aluminum-Lithium Alloys: Processing, Properties, and Applications in e-book can be your alternative.

##### **Robert Carlson:**

Spent a free time to be fun activity to complete! A lot of people spent their down time with their family, or their friends. Usually they doing activity like watching television, going to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own free time/ holiday? May be reading a book may be option to fill your totally free time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to test look for book, may be the book untitled Aluminum-Lithium Alloys: Processing, Properties, and Applications can be great book to read. May be it can be best activity to you.

##### **Nettie Powers:**

Would you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Try and pick one book that you find out the inside because don't determine book by its cover may doesn't work here is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside appear likes. Maybe you answer may be Aluminum-Lithium Alloys: Processing, Properties, and Applications why because the amazing cover that make you consider concerning the content will not disappoint anyone. The inside or content is definitely fantastic as the outside or cover. Your reading 6th sense will directly make suggestions to pick up this book.

**Wayne Martin:**

As a pupil exactly feel bored to help reading. If their teacher requested them to go to the library in order to make summary for some guide, they are complained. Just minor students that has reading's internal or real their leisure activity. They just do what the educator want, like asked to the library. They go to there but nothing reading very seriously. Any students feel that looking at is not important, boring and also can't see colorful images on there. Yeah, it is to get complicated. Book is very important for you. As we know that on this era, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore this Aluminum-Lithium Alloys: Processing, Properties, and Applications can make you truly feel more interested to read.
