Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science) From Springer

Scheduled transportation networks give rise to very complex and large-scale network optimization problems requiring innovative solution techniques and ideas from mathematical optimization and theoretical computer science. Examples of scheduled transportation include bus, ferry, airline, and railway networks, with the latter being a prime application domain that provides a fair amount of the most complex and largest instances of such optimization problems. Scheduled transport optimization deals with planning and scheduling problems over several time horizons, and substantial progress has been made for strategic planning and scheduling problems in all transportation domains.

This state-of-the-art survey presents the outcome of an open call for contributions asking for either research papers or state-of-the-art survey articles. We received 24 submissions that underwent two rounds of the standard peer-review process, out of which 18 were finally accepted for publication.

The volume is organized in four parts: Robustness and Recoverability, Robust Timetabling and Route Planning, Robust Planning Under Scarce Resources, and Online Planning: Delay and Disruption Management.

Editorial Review

From the Back Cover

Scheduled transportation networks give rise to very complex and large-scale network optimization problems requiring innovative solution techniques and ideas from mathematical optimization and theoretical computer science. Examples of scheduled transportation include bus, ferry, airline, and railway networks, with the latter being a prime application domain that provides a fair amount of the most complex and largest instances of such optimization problems. Scheduled transport optimization deals with planning and scheduling problems over several time horizons, and substantial progress has been made for strategic planning and scheduling problems in all transportation domains.

This state-of-the-art survey presents the outcome of an open call for contributions asking for either research papers or state-of-the-art survey articles. We received 24 submissions that underwent two rounds of the standard peer-review process, out of which 18 were finally accepted for publication.

The volume is organized in four parts: Robustness and Recoverability, Robust Timetabling and Route Planning, Robust Planning Under Scarce Resources, and Online Planning: Delay and Disruption Management.

Users Review

From reader reviews:

Eddie Drennan:

Reading a book can be one of a lot of task that everyone in the world enjoys. Do you like reading book so. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new information. When you read a book you will get new information due to the fact book is one of several ways to share the information or their idea. Second, studying a book will make you actually more imaginative. When you studying a book especially hype book the author will bring that you imagine the story how the personas do it anything. Third, you could share your knowledge to other people. When you read this Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science), you are able to tells your family, friends in addition to soon about yours publication. Your knowledge can inspire different ones, make them reading a guide.

Gary Jensen:

Are you kind of busy person, only have 10 or perhaps 15 minute in your morning to upgrading your mind talent or thinking skill even analytical thinking? Then you have problem with the book in comparison with can satisfy your short period of time to read it because pretty much everything time you only find e-book that need more time to be learn. Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science) can be your answer mainly because it can be read by anyone who have those short extra time problems.

Denise Wallis:

As a college student exactly feel bored for you to reading. If their teacher asked them to go to the library or even make summary for some book, they are complained. Just little students that has reading's heart and soul or real their passion. They just do what the educator want, like asked to the library. They go to presently there but nothing reading significantly. Any students feel that reading is not important, boring along with can't see colorful photos on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. So , this Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science) can make you feel more interested to read.

Charles Gray:

Some people said that they feel uninterested when they reading a guide. They are directly felt it when they get a half areas of the book. You can choose typically the book Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science) to make your current reading is interesting. Your own personal skill of reading talent is developing when you like reading. Try to choose simple book to make you enjoy to learn it and mingle the idea about book and reading through especially. It is to be initial opinion for you to like to open a book and examine it. Beside that the book Robust and Online Large-Scale Optimization: Models and Techniques for Transportation Systems (Lecture Notes in Computer Science) can to be your brand new friend when you're experience alone and confuse in what must you're doing of the time.
