**Analyzing Compositional Data with R (Use R!)** By K. Gerald van den Boogaart, Raimon Tolosana-Delgado

This book covers statistical analysis of compositional data sets from basic principles to applications in descriptive exploratory analysis, robust linear models and advanced multivariate statistical methods. Offers many illustrated examples and code chunks.

### Editorial Review

#### Review

From the reviews:

“This book offers not only the theoretical background to analyse and interpret compositional data, but also the R support and guidance for the compositions package. The book is organised in 7 chapters. ... The book is built in an accessible manner for undergraduates and postgraduates alike and offers an all in one overview of the analysis of compositional data in R.” (Irina Ioana Mohorianu, zbMATH, Vol. 1276, 2014)

From the Back Cover

This book presents the statistical analysis of compositional data sets, i.e., data in percentages, proportions, concentrations, etc. The subject is covered from its grounding principles to the practical use in descriptive exploratory analysis, robust linear models and advanced multivariate statistical methods, including zeros and missing values, and paying special attention to data visualization and model display issues. Many illustrated examples and code chunks guide the reader into their modeling and interpretation. And, though the book primarily serves as a reference guide for the R package “compositions,” it is also a general introductory text on Compositional Data Analysis.

Awareness of their special characteristics spread in the Geosciences in the early sixties, but a strategy for properly dealing with them was not available until the works of Aitchison in the eighties. Since then, research has expanded our understanding of their theoretical principles and the potentials and limitations of their interpretation. This is the first comprehensive textbook addressing these issues, as well as their practical implications with regard to software.

The book is intended for scientists interested in statistically analyzing their compositional data. The subject enjoys relatively broad awareness in the geosciences and environmental sciences, but the spectrum of recent applications also covers areas like medicine, official statistics, and economics.

Readers should be familiar with basic univariate and multivariate statistics. Knowledge of R is recommended but not required, as the book is self-contained.

#### About the Author

**Prof. K. Gerald van den Boogaart** is the head of the Modeling and Valuation Department of the Helmholtz Institute Freiberg for Resource Technology and holds the chair of Applied Stochastic at TU Bergakademie Freiberg. Previously he was a professor of statistics in Greifswald. Throughout his career he has worked closely with various geoscientists, biologists and engineers.

**Raimon Tolosana-Delgado** is an Engineering Geologist and holds an MSc in Environmental Sciences. He received his PhD from the University of Girona, recognized as one of the world’s leading centers for Compositional Data Analysis. He has worked, mainly in the fields of sedimentology and oceanography, at several universities in Spain and Germany. He is currently a fellow researcher at the Helmholtz Institute Freiberg for Resource Technology.

## Users Review

### From reader reviews:

#### Sybil Davis:

Reading a reserve tends to be new life style in this particular era globalization. With reading through you can get a lot of information that can give you benefit in your life. Having book everyone in this world could share their idea. Publications can also inspire a lot of people. A lot of author can inspire their reader with their story or even their experience. Not only situation that share in the ebooks. But also they write about the data about something that you need instance. How to get the good score toefl, or how to teach your kids, there are many kinds of book that you can get now. The authors on this planet always try to improve their skill in writing, they also doing some investigation before they write to the book. One of them is this Analyzing Compositional Data with R (Use R!).

#### James Jones:

Reading can called imagination hangout, why? Because when you find yourself reading a book mainly book entitled Analyzing Compositional Data with R (Use R!) your brain will drift away trough every dimension, wandering in most aspect that maybe unidentified for but surely will end up your mind friends. Imaging every single word written in a guide then become one contact form conclusion and explanation that will maybe you never get ahead of. The Analyzing Compositional Data with R (Use R!) giving you one more experience more than blown away your brain but also giving you useful facts for your better life on this era. So now let us explain to you the relaxing pattern this is your body and mind will probably be pleased when you are finished reading it, like winning an activity. Do you want to try this extraordinary shelling out spare time activity?

#### Daniel Love:

Many people spending their time by playing outside having friends, fun activity having family or just watching TV all day every day. You can have new activity to invest your whole day by looking at a book. Ugh, think reading a book can really hard because you have to accept the book everywhere? It ok you can have the e-book, bringing everywhere you want in your Smart phone. Like Analyzing Compositional Data with R (Use R!) which is obtaining the e-book version. So , why not try out this book? Let's observe.

#### Michael Clark:

Don't be worry in case you are afraid that this book will certainly filled the space in your house, you can have it in e-book method, more simple and reachable. That Analyzing Compositional Data with R (Use R!) can give you a lot of good friends because by you taking a look at this one book you have issue that they don't and make a person more like an interesting person. This particular book can be one of one step for you to get success. This book offer you information that maybe your friend doesn't recognize, by knowing more than some other make you to be great people. So , why hesitate? We need to have Analyzing Compositional Data with R (Use R!).
