Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) By N. J. Hitchin, G. B. Segal, R. S. Ward

This textbook for graduate students introduces integrable systems through the study of Riemann surfaces, loop groups, and twistors. The introduction by Nigel Hitchin addresses the meaning of integrability, discussing in particular how to recognize an integrable system. He then develops connections between integrable systems and algebraic geometry and introduces Riemann surfaces, sheaves, and line bundles. In the next part, Graeme Segal takes the Korteweg-de Vries and nonlinear Schrödinger equations as central examples and discusses the mathematical structures underlying the inverse scattering transform. He also explains loop groups, the Grassmannian, and algebraic curves. In the final part of the book, Richard Ward explores the connection between integrability and self-dual Yang-Mills equations and then describes the correspondence between solutions to integrable equations and holomorphic vector bundles over twistor space.

Editorial Review

Review

"the subject of the book is fascinating and written versions of the lecture series are nicely presented and preserve well the informal spirit of the lectures. This is a very useful book for graduate students and for mathematicians (or physicists) from other fields interested in the topic' EMS

"The lecturers cover an enormous amount of material, ranging from algebraic geometry and the theory of Riemann surfaces to loop groups, connections, Yang-Mills equations and twistor theory. However despite this wide range, the book is surprisingly self-contained and readable" Bulletin of the London Mathematical Society"

About the Author

N. J. Hitchin is at University of Oxford. G. B. Segal is at University of Cambridge.

Users Review

From reader reviews:

Clementine Frazier:

Nowadays reading books become more and more than want or need but also work as a life style. This reading routine give you lot of advantages. Advantages you got of course the knowledge the actual information inside the book in which improve your knowledge and information. The info you get based on what kind of book you read, if you want send more knowledge just go with training books but if you want truly feel happy read one using theme for entertaining for instance comic or novel. The actual Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) is kind of e-book which is giving the reader unpredictable experience.

Douglas Gibson:

Reading can called head hangout, why? Because when you are reading a book specially book entitled Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) your mind will drift away through every dimension, wandering in each and every aspect that maybe unknown for but surely will end up your mind friends. Imaging each word written in a publication then become one contact form conclusion and explanation which maybe you never get before. The Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) giving you a different experience more than blown away your thoughts but also giving you useful data for your better life in this era. So now let us show you the relaxing pattern the following is your body and mind will likely be pleased when you are finished reading through it, like winning a game. Do you want to try this extraordinary shelling out spare time activity?

Joseph Cobble:

That e-book can make you to feel relax. That book Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) was colorful and of course has pictures around. As we know that book Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) has many kinds or genre. Start from kids until teens. For example Naruto or Detective Conan you can read and think that you are the character on there. So , not at all of book tend to be make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading that will.

David Burch:

As a university student exactly feel bored for you to reading. If their teacher questioned them to go to the library as well as to make summary for some guide, they are complained. Just tiny students that has reading's heart and soul or real their hobby. They just do what the teacher want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that examining is not important, boring in addition to can't see colorful images on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this time, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. So , this Integrable Systems: Twistors, Loop Groups, and Riemann Surfaces (Oxford Graduate Texts in Mathematics, Vol. 4) can make you really feel more interested to read.
