Editorial Review

Review

From the reviews:

"In this book, the author presents simple, concise, easy-to-understand methods for identifying nonlinear systems using adaptive filter algorithms well known for linear systems identification. The book focuses on the Volterra and Wiener models for nonlinear systems It is another contribution to the current literature on the subject. The book will be useful for graduate students, engineers and researchers in the area of the nonlinear systems identification and adaptive signal processing." (George S. Stavrakakis, Zentralblatt MATH, Vol. 1130 (8), 2008)

From the Back Cover

Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches introduces engineers and researchers to the field of nonlinear adaptive system identification. The book includes recent research results in the area of adaptive nonlinear system identification and presents simple, concise, easy-to-understand methods for identifying nonlinear systems. These methods use adaptive filter algorithms that are well known for linear systems identification. They are applicable for nonlinear systems that can be efficiently modeled by polynomials.

After a brief introduction to nonlinear systems and to adaptive system identification, the author presents the discrete Volterra model approach. This is followed by an explanation of the Wiener model approach. Adaptive algorithms using both models are developed. The performance of the two methods are then compared to determine which model performs better for system identification applications.

Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches is useful to graduates students, engineers and researchers in the areas of nonlinear systems, control, biomedical systems and in adaptive signal processing.

Book is usually written, printed, or highlighted for everything. You can learn everything you want by a book. Book has a different type. We all know that that book is important thing to bring us around the world. Adjacent to that you can your reading expertise was fluently. A guide Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology) will make you to always be smarter. You can feel more confidence if you can know about every little thing. But some of you think this open or reading a book make you bored. It's not make you fun. Why they could be thought like that? Have you seeking best book or suitable book with you?

Irma Tijerina:

Book is to be different for each grade. Book for children until eventually adult are different content. As we know that book is very important normally. The book Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology) was making you to know about other expertise and of course you can take more information. It is rather advantages for you. The publication Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology) is not only giving you far more new information but also to get your friend when you experience bored. You can spend your own spend time to read your e-book. Try to make relationship with the book Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology). You never feel lose out for everything in the event you read some books.

Myron Mendez:

Some individuals said that they feel bored stiff when they reading a guide. They are directly felt the idea when they get a half areas of the book. You can choose the book Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology) to make your own reading is interesting. Your own personal skill of reading skill is developing when you like reading. Try to choose very simple book to make you enjoy to read it and mingle the sensation about book and looking at especially. It is to be 1st opinion for you to like to open a book and examine it. Beside that the publication Adaptive Nonlinear System Identification: The Volterra and Wiener Model Approaches (Signals and Communication Technology) can to be your friend when you're sense alone and confuse in doing what must you're doing of this time.
