The Cambridge History of Science, Volume 3: Early Modern Science From Brand: Cambridge University Press

This volume is a comprehensive account of knowledge of the natural world in Europe, ca. 1500-1700. Often referred to as the Scientific Revolution, this period saw major transformations in fields as diverse as anatomy and astronomy, natural history and mathematics. Articles by leading specialists describe in clear, accessible prose supplemented by extensive bibliographies, how new ideas, discoveries, and institutions shaped the ways in which nature came to be studied, understood, and used.

Editorial Review

Review

"This book is an excellent source for current thinking on Early Modern Science. The chapters are written by the leading scholars in their respective fields. This book, along with the rest of the Cambridge History of Science series, belongs in all academic and large public libraries." - American Reference Books Annual

"The real value of the volume, in my eyes at least, is its contribution to _early modern_ history...The breadth and range of the volume is breathtaking and, hard as I tried, I could think of little that was lacking... virtually the entire social and cultural panorama of early modern society receives intelligent and sophisticated coverage...it should be mandatory reading for every early modernist, no matter his or her particular scholarly orientation." - H-German

"Individually the contributions to this volume are thoughtful, well-researched summations of the state of the art in their specific topical areas. As such they constitute a useful disciplinary resource for teachers but also mark the way for the next generation of extensions, revisions and syntheses." - Jole Schakelford, University of Minnesota

"...a short review cannot do justice to the breadth of the individual essays or the volume as a whole. This work is as comprehensive as humanly possible on such a various, wide-ranging subject, and it would be unfair to mention lacunae." - Sixteenth Century Journal

About the Author

Lorraine Daston is Director at the Max Planck Institute for the History of Science and Honorary Professor at the Humboldt-Universität, Berlin. She is the author of *Wonders and the Order of Nature, 1150-1750* (with Katharine Park, 1998) and *Wunder, Beweise und Tatsachen: Zur Geschichte der Rationalität* (2001).

Katharine Park is Zemurray Stone Radcliffe Professor of the History of Science and of the Studies of Women, Gender and Sexuality at Harvard University, Massachusetts. She is the author of *Doctors and Medicine in Early Renaissance Florence* (1985), and *Secrets of Women: Gender, Generation and the Origins of Human Dissection* (2007). Her work has appeared in *Isis*, *The Renaissance Quarterly*, and *Renaissance Studies*, and many periodicals.

Users Review
